Overview of TREES

![ART - Architecture for REDD+ Transactions]

Three categories of activities are eligible to generate TREES Credits

Requirements

TREES specifies requirements for the quantification, monitoring, reporting and verification of Greenhouse Gas (GHG) emission reductions and removals from REDD+ activities at a national or large jurisdictional scale.

Removals

ART credits for carbon removals from the establishment of new forests on land without forest cover.

Reducing deforestation and degradation

ART credits for emission reductions from reducing deforestation and forest degradation – the most urgent priority for the forest sector.

High Forest Low Deforestation Areas

ART credits for emission reductions and removals in jurisdictions that have high forest cover and low rates of deforestation (HFLD).
